\* Lighting customizable with HyperX NGENUITY software or with motherboard RGB control software. RGB customization support through third party software may vary.

\*\*HyperX Plug N Play memory will run in DDR4 systems up to the speed allowed by the manufacturer's system BIOS. PnP cannot increase the system memory speed faster than is allowed by the manufacturer's BIOS. HyperX Plug N Play DDR4 products support XMP 2.0 specifications so overclocking can also be achieved by enabling the built-in XMP Profile.
